

The background of the advertisement features a close-up, angled view of a door's edge, showing a dark wood-grain finish on the left and a grey, textured composite material on the right. A silver handle is visible on the right side. In the lower-left corner, a smaller image shows a wooden door with a silver, semi-circular decorative element and a silver handle.

- ✓ rebate or non-rebated doors, opening to the outside or inside.

## UNIQUE

- ✓ by using to production composite materials with unreachable for traditional materials parameters - we set new trends in the quality and design of the front door,
- ✓ VIKKING composite doors are manufactured using advanced technologies that are protected by the international patents,
- ✓ innovative structural pasting of glass units, provides a stability of doors, safety and protection against loss of energy,
- ✓ composite doors with SMOOTH surface, or in its unique combination
- ✓ with the structure of the grain wood - Real Wood in any configuration and color,
- ✓ innovative stained glass in unlimited design, hand-created in own studio by the best craftsmen,
- ✓ flexibility of combining colors in unlimited scope completes the uniqueness of composite doors VIKKING.

## FUNCTIONAL

- ✓ maintenance of door kept to a minimum and is not complicated,
- ✓ paint coatings don't require periodic maintenance,
- ✓ specially developed, six-chamber PVC door frames Class A Plus have a unique surface of precious wood, in contrast to which they are completely resistant to moisture
- ✓ and don't require maintenance,
- ✓ surfaces of composite sashes are resistant to damage,
- ✓ composite doors have the optimal price-advantage ratio,
- ✓ each order is individually produced by experienced professionals, for whom customer satisfaction is the highest recognition.

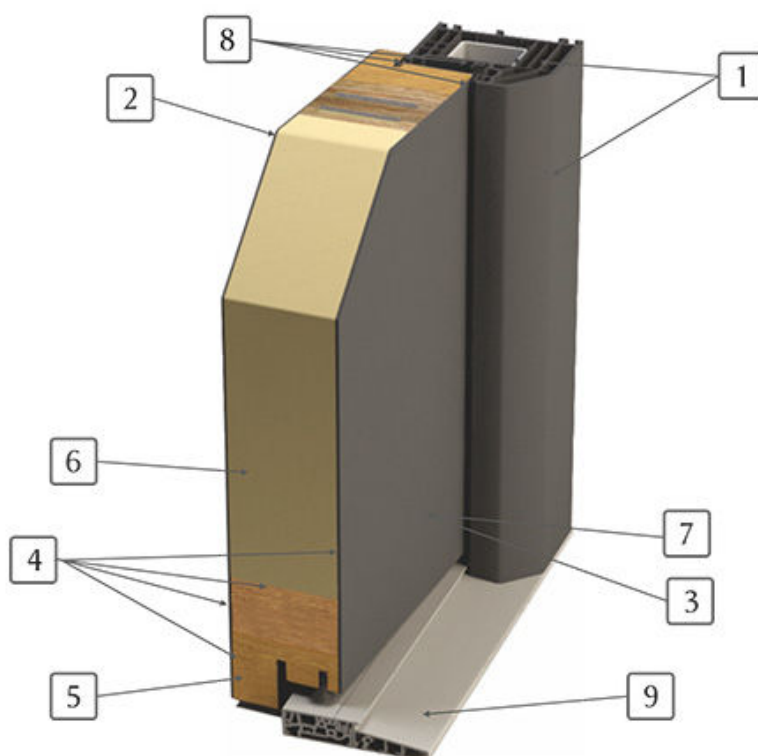

## SOLID

- ✓ composite doors have the aesthetics of wood, light weight of aluminium, resistance of steel and durability of PVC, are also free from defects associated to traditional materials,
- ✓ advanced technology, the highest quality components, fittings and coatings of renowned manufacturers provide many years of trouble-free operation,
- ✓ composite doors VIKKING are resistant to moisture and most difficult climatic conditions - composite sashes don't deform under the influence of weather conditions, we can guarantee their constant technical durability for decades.

## Construction of composite doors Vikking - 12 arguments for yes:

1. Innovative, six-chamber PVC door frame class A Plus with structured precious wood surface. PVC profiles are resistant to moisture, perfectly insulate from the cold and require no maintenance.
2. Composite sash with specially reinforced construction which prevents deformation, even in difficult weather conditions; resistant to moisture and mechanical damage. Only composite sashes keep consistently high quality for decades without the need of maintenance and painting.
3. Sash linings made from the highest quality composite panels resistant to scratches and damage.
4. Solid multi-layer construction provides stability of the sash and burglar protection.
5. Waterproof composite frame protects the interior of the sash from moisture.
6. CFC-free insulation provides excellent protection against the heat loss.
7. The highest quality coatings in any RAL colors or in one of the many wood grain decors combined with total resistance of composite doors to moisture makes them resistant in the extent of the reach of traditional materials.
8. Silicone seals designed specifically for composite doors, provide maximum protection against the heat loss around the perimeter and provide a pleasant sound when closing.
9. Low threshold with durable aluminium thermal barrier provides insulation from the external climate.
10. Heat-insulating subliminal profiles with warm assembly system provide a stable positioning of door eliminates thermal bridges and protects against moisture.
11. Specially designed and manufactured locking plates made of stainless steel provides full adjustment during the long-term usage.
12. System of multi-point locks and anti-theft blockades raises the level of burglary protection.

***We constantly develop and improve production processes, so that you can decide on the final design and accessories of your door of dreams.***

# Why composite doors Vikking

**No longer you don't have to agree to compromises!**

Not all suppliers are able to meet the stringent requirements for the highest aesthetic of doors combined with the best protection of your home.

We have developed from the scratch innovative composite doors to meet your most demanding expectations.

Advanced technology and innovative solutions enable to make any door of your dreams without any concessions in quality and durability!

No other doors have as many advantages, without defects and limitations associated with traditional technologies, composite doors are resistant to adverse weather conditions, don't absorb the moisture, don't corrode and retain consistently high quality for decades.

For years, our motto is:

**"What for others is unusual - we treat it as a standard, what for others is impossible - we make it tomorrow".**

VIKKING from many years is specializing in the implementation of most custom orders.

Unleash your creativity from the threshold and start by changing the door.

Choose your style, any combination of colors and surface textures of doors, choose most convenient handles and beautiful stained glass windows, we will take care of the rest with the greatest reverence.

To ensure the transparency of our extremely rich offer, this publication will make it easy to choose the door by division them on lines, collections, models and equipment.

Five lines, two collections, number of models and stained glass designs limited by the imagination are undoubted advantages of the system of composite doors VIKKING.

## For your convenience - **NEW INFORMATION SYSTEM**

The product meets the requirements of the European Union

Sash thickness

## OPTIMAL line ★★

Composite doors of OPTIMAL line have an excellent quality products with well-balanced design and high performance. Their additional advantage is the long-term durability combined with a minimum of maintenance. The optimal offer for those, who is looking for excellent quality doors at affordable prices.

Protection factor against heat loss -  $U_p$  from 0,85 W/m<sup>2</sup>K

### Purpose of door:

- ✓ Entrance external doors dedicated to housing, opening to the outside or inside
- ✓ Entrance internal doors.

### Standard equipment:

- ✓ composite sash 45 mm in the rebate version of wood-like surface Real Wood structure
- ✓ PVC door frame 70 mm made of six-chamber profile class A of wood-like surface Real Wood structure,
- ✓ door set finally painted with the highest quality lacquers in the full range of RAL colors optional: in one of the wood decors - see price list,
- ✓ low aluminium threshold with thermal barrier, optional: with the system of insulating profiles - see price list,
- ✓ three 3D adjustable hinges with increased resistance to burglary,
- ✓ three-point anti-theft strip lock, lockable by handle, optional: anti-theft blockade system - see price list,
- ✓ 3 locking plates made of stainless steel,
- ✓ double sealing system around the edges
- ✓ in versions with glazing: triple glazed units decorated with use of resin technology.

**Optional:** custom projects - see price list.

**Dedicated fittings:** see price list.

**Note!** Doors of OPTIMAL line are resistant to moisture, but they still should be protected by use of roofing, that provides full protection against sunlight, which may, in extreme circumstances result in short-term deformation of the sash.

## INTERIOR line ★

Composite entrance doors of INTERIOR line have a timeless solutions that combines durability, safety and aesthetics of the non-rebated sashes.

Protection factor against heat loss -  $U_p$  from 1,0 W/m<sup>2</sup>K

### Purpose of door:

- ✓ Entrance internal doors,
- ✓ Entrance external doors opening to the outside or inside,
- ✓ technical doors and indoor doors - composite sashes have above-average resistance to heavy utilization and vandalism, while maintaining excellent protection against cold, noise and burglary,
- ✓ perfect especially for facilities with high usage and requirements of above-average moisture resistance.

### Standard equipment:

- ✓ composite sash 45 mm in the non-rebated version of wood-like surface Real Wood structure,
- ✓ PVC door frame 70 mm made of five-chamber profile of wood-like surface Real Wood structure,
- ✓ door set finally painted with the highest quality lacquers in the full range of RAL colors optional: in one of the wood decors - see price list,
- ✓ low aluminium threshold with thermal barrier,
- ✓ three 3D adjustable hinges,
- ✓ mortise lock 72mm x 45mm, optional: additional upper lock or three-point anti-theft strip lock lockable by handle, see price list,
- ✓ adjustable locking plates,
- ✓ triple sealing system of door frame and double sealing of threshold,
- ✓ in versions with glazing: triple glazed units decorated with use of resin technology.

**Optional:** custom projects - see price list.

**Dedicated fittings:** see price list.

**Note!** Doors of INTERIOR line are resistant to moisture, but they still should be protected by use of roofing, that provides full protection against sunlight, which may, in extreme circumstances result in short-term deformation of the sash.

## The most popular colors of composite doors

Above we present the RAL colors, in which the most common are painted composite doors. Our customers have access to a full range of RAL and they decide about the color of their doors of dream.

For lovers of precious wood colors, we offer to choose from one of the many decors created by hand by craftsmen with the highest qualifications.

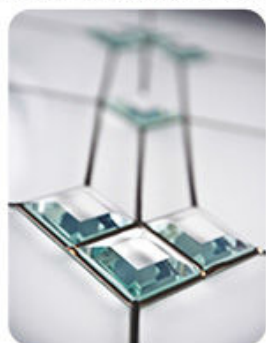

Composite doors VIKKING can be painted in two colors (divided into the outer side and an inner side), as well as several colors on each side.

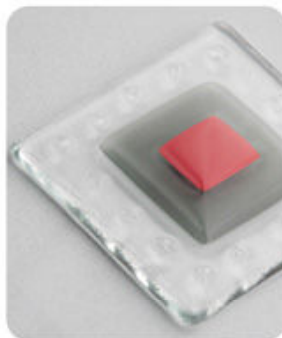

# Style, design, color - especially for you

**Bevels - the beauty of grinded glass**

**Swarovski - the jewellery of your door**

**Fusing - the colors fired in the glass**

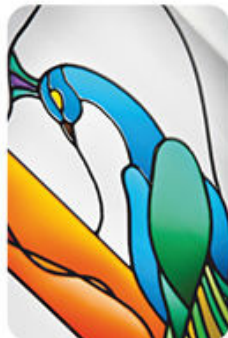

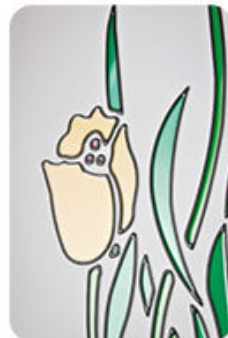

**Inox - charm of stainless steel**

**Laser decorations - style and precision**

**Resin - festival of colors**

**LED lighting - bright accent of your home**

Small bubbles, lines, pollen, inclusions and surface imperfections are natural properties of stained glass decorations. They are not considered to be defects. Assessment of defects must be made at the daily diffused light, with the unaided eye from a distance of at least 1 m looking at right angles.

## BioKey – Your biometric key

### Your fingerprint reader Your biometric key

The fingerprint reader provides security for you and your loved ones without the risk of loss or theft of the keys. Your (thumb / finger) is impossible to falsify.

Perfect solution for the household who often come in the house and go outside.

Put the registered finger to the reader and slide along the surface of the reader, and your door will open automatically.

When you cross the threshold - the door closer will immediately close the sash and the automatic lock will block it again. When you want you can open the door from the outside with use of the key and from the inside with use of the handle.

Ingeniously simple coding and change of the users do not need to use software or tools.

The fingerprint reader can be connected to the intelligent home system.

Forget about the keychain and slammed door. A fingerprint reader is comfort as well as the security of your loved ones. Allows for registration up to 150 users.

### Keyboard made of stainless steel

The keyboard is usually mounted in the sash. On the outside is visible the waterproof keypad made of stainless steel.

The controls are very simple, motor door lock is unlocked by entering any of the programmed code (4 to 8 digits). When you cross the threshold - the door closer will immediately close the sash and the automatic lock will block it again. When you want you can open the door from the outside with use of the key and from the inside with use of the handle.

The system can be programmed in a very friendly way with a considerable amount of codes, that can be allocated to any person and at any time can be change directly on the keyboard.

Excellent solution for public and multi-family buildings as the first barrier to access.

Biokey keyboard can be connected to the intelligent home system.

### Bluetooth

Control of lock in composite doors has never been so comfortable and easy.

Just use your phone with bluetooth application to get rid of the annoying keychain.

Bring your phone close up to the reader and touch your finger to the bluetooth panel - the automatic lock will immediately unlock the locking bolts.

When you cross the threshold - the door closer will immediately close the sash and the automatic lock will block it again.

When you want you can open the door from the outside with use of the key and from the inside with use of the handle.

Comfort within your multimedia phone.

Simple, intuitive application - and your doors are becoming more intelligent.

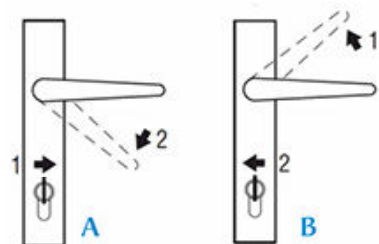

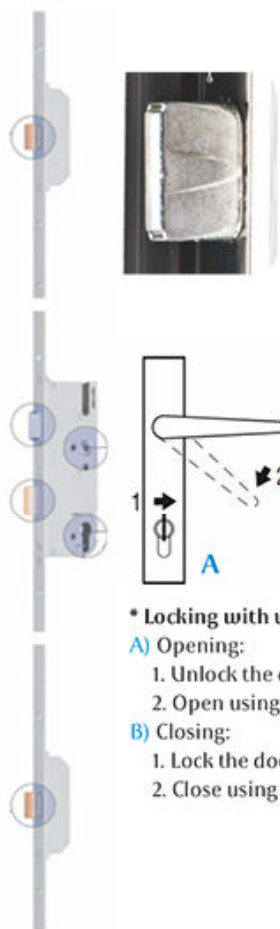

Biokey system allows you to program up to 6 devices and can be connected to the intelligent home system.

For your convenience and security in all doors in rebate version we use the highest-quality multi-point, anti-theft strip locks

## ***We will take care of the nature and future generations***

Directive of the European Parliament dated 19.05.2010 on the energy performance of buildings requires that after 31/12/2020 all new buildings should be nearly zero-energy buildings.

**Passive buildings are the energy efficient buildings with the highest thermal comfort and extremely low energy demand for heating - less than 15 kWh/m<sup>2</sup>/year.**

Passive building is designed to use and keep inside the warmth deriving from the sun and renewables.

Do not wait until the last minute, save today!

**Arctic Plus composite doors with a vengeance meet the strict requirements of the passive house.**

**The idea of passive construction is very close to us.**

We actively support all activities to promote the improvement of energy efficiency, reduction of emissions of CO<sub>2</sub> and other harmful gases into the atmosphere.

Our share in the development of energy-efficient, airtight and durable composite doors has been confirmed by Polish Passive House Institute and Renewable Energy by granting us the title of **Ambassador of Passive Construction.**

## What you should know about installation of the front door?

The door mounted before the completion of all works is exposed to damage or destruction. In this case, until the works are completed we recommend the use of temporary technical doors.

**The door should be installed after the completion of all wet construction works, completion of target floor and bringing the humidity inside the building to a stable level below 60%.**

**Prior to installation, the wall within the door opening shall be prepared to the dimensions recommended by the manufacturer and the floor within the threshold section should have a channel required for the positioning of insulating PVC profiles.**

In principle (if the investor has not made other arrangements with the seller) these works are not included in standard door assembly service.

**Connection of door with the wall should be made in such a way, that it provides the total air tightness through a layer of frame insulation. Triple-layer warm assembly with the use of internal and external films increases the tightness with the wall by more than 70% compared to a conventional installation using polyurethane foam.**

**Composite entrance doors should be installed close to the outer layer of insulation in order to optimal use of their excellent protection against heat loss. The optimal solution is the location of the door frame in the way that it is partially covered by outer insulation wall.**

**Application of the method called triple-layer warm assembly eliminates thermal bridges and will contribute to the reduction of energy losses.**

**Traditional methods using mounting foam will not provide permanent protection against moisture and heat loss. Negligence in this regard can lead to costly, irreversible damage and to the growth of mold and mildew.**

To provide a stable positioning and protection against heat loss, the door should be firmly fixed on a PVC insulation profile with use of professional mounting components recommended by the manufacturer.

Equally important is the **proper execution of thermo-insulation and waterproofing within threshold section.**

For the isolation of subliminal part it is prohibited to use mounting foams, for this purpose should be done only **insulating expansion tape 15 / 5-12 or a flexible EPDM film.**

**NOTE:** Prohibited is to assembly the door with use of anchors used for PVC windows because of their limpness, not providing the stability of door frame profiles.

**All recommended components for correct installation, composite doors insulation and preservatives are available in the manufacturer's offer and its authorized distributors - see [www.vikking.eu/dealerzy](http://www.vikking.eu/dealerzy).**

Detailed conditions of door installation determine the manual attached to the product in the language of country of destination. Flagrant derogation from the rules of correct assembly of composite door may cause limitation or exclusion of manufacturer's warranty. Summarizing: **the door installation should be made by trained and authorized installers and in accordance with the manufacturer's instructions.**

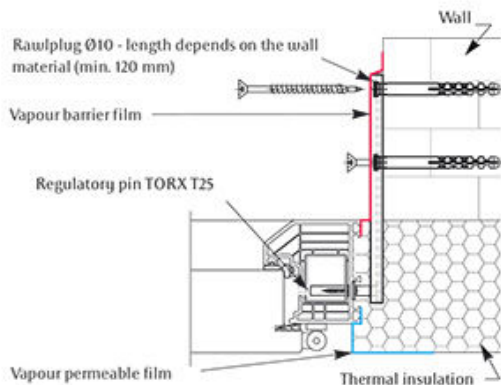

Fulfillment of this requirement allows for full warranty protection and trouble-free operation of composite doors for many years.

**PLEASE REMEMBER! Professional installation is a very important link that affects the safety, comfort and operation of composite doors VIKKING.**

Detailed guidelines of composite doors assembly available for partners on: <http://strefa-partnera.vikking.eu>

# Hinge regulation instruction

## Conditions of composite doors use

Composite doors, unlike traditional doors do not corrode, are resistant to moisture and difficult climatic conditions. Painting of the door is primarily made to improve their aesthetic properties; possible damage to coating does not affect the technical durability of composite doors and door frames.

However, to extend the period of trouble-free service of fittings, sealings and coatings - we recommend the use of roofings which protects the door from the UV.

During intense solar radiation, doors in white color heat up to 45°C. In similar conditions the surface of the door in dark colors may exceed 75°C. In extreme conditions, especially from the southern side, composite sash may temporary deform but after the cessation of the cause will return to its original state. In such locations we recommend the use of roofing which protects the door in dark colors against excessive heating or use the door from the ARCTIC or ARCTIC Plus line.

### Conditions of roofings:

ARCTIC PLUS line - optional;

ARCTIC line - optional;

PREMIUM line - required in dark colors of door installed on the southern wall of the building,

Lines: OPTIMAL; INTERIOR: mandatory.

Seals, fittings and moving parts of door, including the mechanisms of locks must be periodically checked and maintained according to the manufacturer's instructions - see: "Installation, use and maintenance of composite door" attached to the product.

Surfaces of glazings have coatings improving the protection against heat loss, for cleaning, use only agents exclusively dedicated to windows cleaning.

Elements made of stainless steel should not have prolonged contact with the standard steel, exhaust fumes and should not be used in areas with high salinity, such as in the vicinity of the sea. In these locations, we recommend the use of doors with composite frames.

Paint coatings of composite doors do not require maintenance; they should be periodically wiped with a damp microfiber cloth. Products from INOX should be periodically cleaned - their surface should be cleaned with use of preparations dedicated to stainless steel.

Dedicated preservatives are available at authorized points of sale.

**WE WISH YOU MANY YEARS OF TROUBLE-FREE USE OF COMPOSITE DOORS**

## Advantages of the system - notice the differences

If you are not sure, what you should pay attention to – compare the parameters of individual lines.

Pay particular attention to:

- ✓ **durability** confirmed by a written warranty of the manufacturer,
- ✓ **resistance** of doors to climatic conditions - especially moisture,
- ✓ **the insulation efficiency** expressed by Ud factor - the lower the value, the greater the protection against the loss of valuable energy,
- ✓ **anti-theft security** according to one applicable European standard RC 2
- ✓ available dimensions of doors and sidelights,
- ✓ equipment, coloring and stained glass decorations,

If you are still not convinced - personally compare parameters, durability and price of our door with any offer from another manufacturer.

"VIKING Composite Doors" is a guarantee of the highest quality for generations

We have created from scratch innovative composite doors of the highest quality and durability.

Regardless of the statutory requirements of consumer protection in the form of warranty for faults and liability for non-conformity of the product with the agreement - we take the challenge of granting the extended warranty for trouble-free operation:

<b>25 years</b>	- Composite sashes - ARCTIC PLUS and ARCTIC lines
<b>20 years</b>	- Composite sashes - PREMIUM line
<b>15 years</b>	- Composite sashes - OPTIMAL and INTERIOR lines
<b>10 years</b>	- PVC door frames, hinges and locking plates
<b>5 years</b>	- Paint coatings and stained glass units
<b>3 years</b>	- Stripe locks and technical efficiency of other components

Ensuring the technical functioning is conditioned by:

- I - correct, adequate to operating conditions selection of doors lines and its equipment
- II - the use of composite door in accordance with its intended use
- III - the correct installation of the door by authorized installers with use of warm assembly according to the manufacturer's guidelines
- IV - making periodic checks, adjustments and maintenance according to the manufacturer's guidelines
- V - immediate removal of possible faults, that will protect against further damage of the door
- VI - the use the door in the segment of individual housing construction, for other applications, apply the standard 3-year warranty

*The full content of the guarantee and guidance on quality acceptance, correct installation, operation and maintenance we attach to each product in the language of country of destination.*

***We provide warranty and post-warranty service.***
